“ Demographic groups do not exhibit monolithic behavior.”

While voter decisions [in 2016] were certainly influenced by their demographic characteristics, their views on the issues and the priorities they assigned to those issues played a critical role.

David Winston
Political Pollster and Strategist

Predict an individual's 2016 Presidential choice with ratings of issue importance

How *important* are the following issues to you?

The Size of Government

- Very
- Somewhat
- Not Very
- Unimportant

Immigration

- Very
- Somewhat
- Not Very
- Unimportant

Racial Equality

- Very
- Somewhat
- Not Very
- Unimportant

Terrorism

- Very
- Somewhat
- Not Very
- Unimportant

Climate Change

- Very
- Somewhat
- Not Very
- Unimportant

Gender Equality

- Very
- Somewhat
- Not Very
- Unimportant

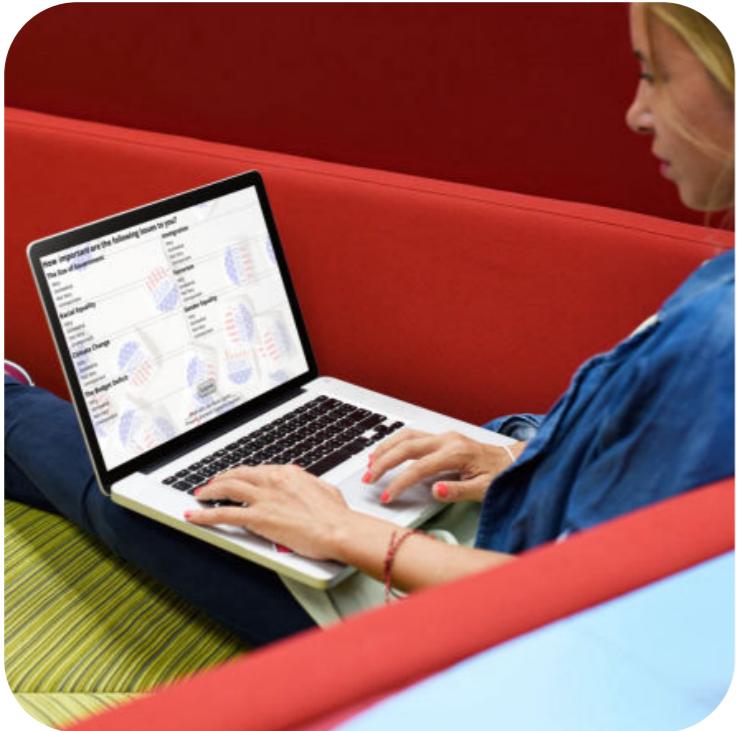

The Budget Deficit

- Very
- Somewhat
- Not Very
- Unimportant

For web

And for mobile

Rationale for issue selection

Next Steps

1

Persist app data

Build database into the back end for persistence of survey data.

2

Set up feedback loop

Did the model predict correctly? What was the user thinking about when they answered "Very Important" to an issue?

3

Analyze feedback language

Is language predictive? Can a model be built using text input of a voter's description of what matters to them?
